

```
import java.util.Scanner;

public class similarities_of_string {

    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);

        String __1 = input.next();
        String __2 = input.next();

        char[] a1 = __1.toCharArray();
        char[] a2 = __2.toCharArray();

//        System.out.println(result(a1, a2));

        input.close();
    }

//    public static boolean result(char[] a1, char[] a2) {
//    }

}
```
